Orders with Requisitions

Order by Patient’s Name (Specimens from Non-interfaced Sites)

To place an order into the system starting at Patient’s name, receive the specimen, and generate barcode labels for the specimen.

**KEYSTROKE**

- **Order Entry Search Screen** displays, cursor defaults to Billing field
- **Type Last Name**
- **Search patient by Last Name**
  - If the name entered is not in the system, a window displays, click on **Yes** button to create new patient. Cursor defaults to Last Name field.
  - If a similar name(s) exists in the system, a list will display on a window, look for a match. If there is no match, click on **New** button then click on **New Patient**. Cursor defaults to Last Name field.
  - **Type in First name**
  - **Type in Middle name**
  - **Click on drop down button to display calendar. Click on the calendar to enter date of birth using YYYY/MM/DD format. If you enter a date of birth, the system automatically calculates the age in the Age**
field. If the date of birth is unknown, you may click on the **Age** field and enter an age.

7. **MRN**

   Enter Medical Record Number. See MRN FORMAT page for list of code format for clients.

8. **Sex**

   Click on drop down button to display list
   Click on appropriate Sex or type **f** for female, **m** for male, **u** for unknown, **n** for not known.

9. **Patient Comm**

   Enter patient comments

10. **HCN**

    Enter Health Card Number

11. **ESO**

    Entered by ICP when appropriate

12. **Sp.**

    Click on the dropdown button to display list
    Click on appropriate Species or type **h** for Homo Sapiens, **o** for Other Species

**In the Stay Section- Under the General Tab:**

13. **Att. Dr.**

    Click on drop down button to display **Doctor Search Screen** window. Enter available information (Doctor’s ID, Last Name and First Name) then click **Find** to search. You can also search by scrolling down the list and double clicking on the corresponding #.

14. **Billing**

    Automatically generated

15. **Adm On**

    Current default date

16. **By:**

    Press Tab to get to the next field
| 17. Stay Comm | Click to enter Stay Comments or press Tab to get to the next field |
| 18. Ward/Hospital Name | Click on drop down button to display Clinic Search Screen window. You can search by scrolling down the list and double clicking on the corresponding #, or by moving the cursor to Area to search by Hospital eg. MSH, QEU, QED, CAMH, etc. Type hospital initial then click on Find. List of Clinics under Area entered displays. Scroll down the list to find clinic of choice. Double Click on the corresponding # to enter Ward. |
| 19. Room | Enter information if available |
| 20. Bed | Enter information if available |
| 21. Report to | Click on drop down button to display Doctor Search Screen window. Enter available information (Doctor’s ID, Last Name and First Name) then click Find to search. You can also search by scrolling down the list and double clicking on the corresponding #. |
| 22. Req. by | Press Tab to assume that the requesting physician is the attending physician |
| 23. Call | Click on Call button to enter Call back information. |
| 24. Order Comm | Click on Order Comm button to enter order comments |
| 25. Priority | Click on drop down button to display list or type r for Routine Order, s for Stat |
26. **Tab or Enter 6x**

To get to the **ID field** on the **Test Ordered Section** or you can simply click on it. The main **Order Entry Keypad** window will display.

Follow **Order/Entry Table** for selection of **TESTS** to be ordered. The following is an example:

**How to order a Sputum Culture and Sensitivity with TB culture:**

27. **J**  

Sputum C&S

28. **M**  

Click on **M** to go to TB Tests|>TBTST

29. **A**  

Click on **A** to order TB as additional test

30. **Source**  

Click on drop down button to display list.

Click on appropriate Source or choose # from keypad

31. **Site**  

Click on Expectorated or Suctioned or choose # from keypad

32. **Click on Add/F6 button x2**  

To document **Collected, Received time and date**

33. **Current antibiotic therapy**  

Click on drop down button to display **Search Results** window. Scroll down the list to find antibiotic of choice, double click on it or type # then press Enter. Drop down button beside antibiotic listed is highlighted, click on it to list another drug

34. **Save**  

Click on **SAVE icon** or **Control S** to save the order or Click on **Add next order icon** to add another order on the same patient.

35. **Click Yes**  

To answer the question “**Do you want to save the changes you made to order?**
36. **Choose label printer**
   
   Click **OK** to print **Collection Label (for all collected specimens)**

37. **Order Entry Search Screen** displays, cursor defaults to the **Billing** field

If **adding next order on the same patient**, **Main Order Entry Screen** displays, cursor defaults to **Req. by** field
Order Entry by Medical Record Number (Specimens from Non-interfaced Sites)

To place an order into the system, receive the specimen, and generate barcode labels for the specimen.

**KEYSTROKES**

Log into the system

1. Double Click on the **Order Entry Icon**

2. Click on the **MRN** field

3. Click on **Next** button or press **Enter**

**INSTRUCTIONS/RESULTS**

**Order Entry Search Screen** displays, cursor defaults to the **Billing** field

Type in Medical Record Number. See MRN FORMAT page for list of code format for clients.

Search patient by MRN.

List of MRN displays, choose correct MRN

If the patient has been entered into the system previously, a window with the patient’s Case/Billing number(s) will display:

a. Choose the case/billing number that matches the case/billing number on the requisition. Click on **Finish** or press **Enter**

   (See Appendix CASE NUMBERS for proper case/billing # selection).

b. Check patient’s demographics:

   If all correct, click **Finish** button then proceed to step 22.

   If the patient information does not match requisition, let one of the LIS Officer know so that they can fix it.

If the patient is not yet entered into the system, a window displays, click on **Yes** button to create new patient. Cursor defaults to Last Name field.

In the patient demographics section: **Fields in yellow are Required Information. TAB key moves cursor to the next field.**
4. **Last Name**  
   Type in Last name

5. **First**  
   Type in First name

6. **Middle**  
   Type in Middle name

7. **DOB**  
   Click on the drop down button to display calendar. Click on the calendar to enter date of birth using YYYY/MM/DD format. If you enter a date of birth, the system automatically calculates the age in the Age field. If the date of birth is unknown, you may click on the Age field and enter an age.

8. **Sex**  
   Click on drop down button to display list  
   Click on appropriate Sex or type f for female, m for male, u for unknown, n for not known

9. **Patient Comm**  
   Enter patient comments

10. **HCN**  
    Enter Health Card Number

11. **ESO**  
    Entered by ICP when appropriate

12. **Sp.**  
    Click on the dropdown button to display list  
    Click on appropriate Species or type h for Homo Sapiens, o for Other Species

**In the Stay Section- Under the General Tab:**

13. **Att. Dr.**  
    Click on drop down button to display **Doctor Search Screen** window. Enter available information (Doctor’s ID, Last Name and First Name) then click **Find** to
search. You can also search by scrolling down the list and double clicking on the corresponding #.

14. **Billing**
   
   Automatically generated

15. **Adm On**
   
   Current default date

16. **By:**
   
   Press Tab to get to the next field

17. **Stay Comm**
   
   Click to enter Stay Comments or press Tab to get to the next field

18. **Ward/Hospital Name**
   
   Click on drop down button to display Clinic Search Screen window. You can search by scrolling down the list and double clicking on the corresponding #, or by moving the cursor to Area to search by Hospital eg. MSH, QEU, QED, CAMH, etc. Type hospital initial then click on Find. List of Clinics under Area entered displays. Scroll down the list to find clinic of choice. Double Click on the corresponding # to enter Ward.

19. **Room**
   
   Enter information if available

20. **Bed**
   
   Enter information if available

**In the Order Section:**

21. **Report to**
   
   Click on drop down button to display Doctor Search Screen window. Enter available information (Doctor’s ID, Last Name and First Name) then click Find to search. You can also search by scrolling

3. Click **Next** button or press **Enter** to search

4. Click **Next** button or press **Enter**

5. Click **Finish**

6. **Tab** or **Enter 9x**

**INSTRUCTIONS/RESULTS**

- Order Entry Search Screen displays, cursor defaults to the **Billing** field
- Type in **MRN** or patient’s full or partial name.
- A search window will display with one or more patients with their MRN. Select the correct patient.
- A window will now display with your patient’s MRN, Name, Ward and various stays for your patient. Select the current stay (match the encounter # from the requisition).
- If a specimen on that patient has been ordered, a list of previous lab orders will display. If this is a new specimen of the day for this patient click **New** button then choose **New Order**
- To create a new order. **Order Entry Screen displays. Cursor is defaulted to Req. by field**
- To get to the **ID field** on the **Test Ordered Section** or you can simply click on it. The
main **Order Entry Keypad** window will display.

**From the Order Entry Keypad:**

7. Click on **PMH/TTH|>OETML**

8. **F**  
   Misc C&S|>TTHCS

9. **A**  
   Culture and Sensitivity

10. **Source**  
    Click on drop down button to display list. Double click on appropriate Source or choose # from keypad then click OK

11. **Site**  
    Free text: Left Hand

12. Click on **Add/F6 button 2x**  
    To document **Collected, Received time and date**

13. **Save**  
    Click on **SAVE icon** or **Control S** to save the order or Click on **Add next order icon** to add another order on the same patient.

14. Click **Yes** or type **Y**  
    To answer the question **“Do you want to save the changes you made to order?**

15. **Choose label printer**  
    Click **OK** to print **Collection Label (for all collected specimens)**

16. **Order Entry Search Screen** displays, cursor defaults to the **Billing** field

If **adding next order on the same patient**, **Main Order Entry Screen** displays, cursor defaults to **Req. by field**
**Adding A New Doctor Not in System (Specimens from Non-Interfaced Sites)**

Add a doctor not currently listed in the system.

**Example:** A new patient has been seen by Dr. Scully in her office. After careful examination, she draws a set of blood cultures into FAN aerobic and FAN anaerobic bottles on this patient. Her nurse brings the specimens and requisitions to the Microbiology for processing.

N.B. This patient has no previous history

Log into the system

1. Double Click on the **Order Entry Icon**

2. Click on the **Last Name** field

3. Click on **Next** button or press **Enter**

**INSTRUCTIONS/RESULTS**

**Order Entry Search Screen** displays, cursor defaults to the **Billing** field

Type Last Name

Search patient by Last Name

If the name entered is not in the system, a window displays, click on **Yes** button to create new patient. Cursor defaults to Last Name field.

If a similar name(s) exists in the system, a list will display on a window, look for a match. If there is no match, click on **New** button then click on **New Patient**. Cursor defaults to Last Name field.

4. **First**

5. **Middle**

6. **DOB**

Type in First name

Type in Middle name

Click on the drop down button to display calendar. Click on the calendar to enter date
of birth using YYYY/MM/DD format. If you enter a date of birth, the system automatically calculates the age in the Age field. If the date of birth is unknown, you may click on the Age field and enter an age.

7. MRN
Enter Medical Record Number. See MRN FORMAT page for list of code format for clients.

8. Sex
Click on drop down button to display list
Click on appropriate Sex or type f for female, m for male, u for unknown, n for not known

9. Patient Comm
Enter patient comments

10. HCN
Enter Health Card Number

11. ESO
Entered by ICP when appropriate

Click on the dropdown button to display list
Click on appropriate Species or type h for Homo Sapiens, o for Other Species

In the Stay Section- Under the General Tab:

13. Att. Dr.
Click on drop down button to display
Doctor Search Screen window. Enter available information (Doctor’s ID, Last Name and First Name) then click Find to search. You can also search by scrolling down the list and double clicking on the corresponding #.

If there is no matching doctor:

General browser: Record not found!
window displays. Click OK then click
14. Press *  

Auxillary Doctor Screen displays

15. Doctor’s Information  
Enter as much information as available on the requisition in appropriate fields. (Ensure you have entered some phone number)

16. Click OK  
When you have completed entering the Doctor’s information.

17. Billing  
Automatically generated

18. Adm On  
Current default date

19. By:  
Press Tab to get to the next field

20. Stay Comm  
Click to enter Stay Comments or press Tab to get to the next field

21. Ward/Hospital Name  
Click on drop down button to display Clinic Search Screen window. You can search by scrolling down the list and double clicking on the corresponding #, or by moving the cursor to Area to search by Hospital eg. MSH, QEU, QED, CAMH, etc. Type hospital initial then click on Find. List of Clinics under Area entered displays. Scroll down the list to find clinic of choice. Double Click on the corresponding # to enter Ward.
22. **Req. by**  
Press Tab to assume that the requesting physician is the attending physician.

23. **Tab 8x**  
Press Tab eight times to get to the **ID field** on the **Test Ordered Section** or you can simply click on it. The main **Order Entry Keypad** window will display.

24. **H**  
Blood Culture

25. **Source**  
Click on drop down button to display list of blood culture bottle combinations. Click on appropriate Source or choose # from keypad.

26. **6**  
For **BFAFN** (FAN aerobic (FA) and FAN anaerobic (FN) bottles)

27. **Site**  
Select **Not specified** from keypad

28. **Click on Add/F6 button x2**  
To document **Collected, Received time and date**

29. **Save**  
Click on **SAVE icon** or **Control S** to save the order or Click on **Add next order icon** to add another order on the same patient.

30. **Click Yes**  
To answer the question **“Do you want to save the changes you made to order?”**

31. **Choose label printer**  
Click **OK** to print **Collection Label (for all collected specimens)**

32. **Order Entry Search Screen** displays, cursor defaults to the **Billing** field

If **adding next order on the same patient**, **Main Order Entry Screen** displays, cursor defaults to **Req. by** field

     Current Antibiotics
     
     Specimen Description
Attach SCC label to specimen. Continue with the next specimen.

Give specimens to planting hood
Accessioning Positive Blood Cultures from Rouge Valley Health System

**Blood culture from Rouge Valley Health System**

Only positive blood cultures from Rouge Valley Health System (RVHS) are sent to this laboratory for culture identification and susceptibility testing. Blood culture bottles have been incubated in the BacT/Alert incubator at RVHS and have been flagged as positive. An initial Gram stain has been performed at RVHS and the ward has been notified. If the bottle was flagged positive after the normal carrier hours, a set of media plates would have to be sub cultured, incubated and sent along with the bottle.

The gram stain information will be written on a BacT/Alert printout containing the bottle identification. If no gram stain result was received call the lab at 905-683-2320 ext 1476 (days) x 1475 (evenings). File the RVHS printout into the dedicated binder.

On occasions where the RVHS BacT/Alert incubator capacity cannot handle all the new cultures, bottles that have not been incubated will be sent to this laboratory. Handle these bottles as per routine and load them into the BacT/Alert as new cultures.

**PROCESSING PROCEDURE:**

**KEYSTROKES**

Log into the system

1. Double Click on the **Order Entry Icon**

2. Click on **Aux. Order** field

3. Click **Next** or press **Enter**

**INSTRUCTIONS/RESULTS**

**Order Entry Search Screen** displays, cursor defaults to the **Billing** field

Type in **MEDITECH specimen number** from accompanying list (11BC0000##### or BacT/Alert printout. If “order not found”, contact LIS officer, **DO NOT** add an order in LIS. Order has to be ordered through Meditech for proper processing.

Search window displays with the order information
4. Click **Finish** or press **Enter**
   To open the order

5. Click **Edit Mode** icon
   To edit the order

6. Click on **Micro tab**

Add Additional Media to a New Specimen Ordered on a Previous Patient (Specimens from Non-Interfaced Sites)

Add a new order and add additional media for the specimen to a patient in the system.

Example: Add an ear swab to a previous patient and add an additional CHOC plate.

KEYSTROKES

INSTRUCTIONS/RESULTS

Log into the system

1. Double Click on the Order Entry Icon

Order Entry Search Screen displays, cursor defaults to the Billing field

2. Click on the MRN or Last Name field

Type in MRN or patient’s full or partial name.

3. Click Next button or press Enter to search

A search window will display with one or more patients with their MRN. Select the correct patient.

4. Click Next button or press Enter

A window will now display with your patient’s MRN, Name, Ward and various stays for your patient. Select the current stay (match the encounter # from the requisition).

If a specimen on that patient has been ordered, a list of previous lab orders will display. If this is a new specimen of the day for this patient click New button then choose New Order.

5. Click Finish

To create a new order. Order Entry Screen displays. Cursor is defaulted to Req. by field
6. **Tab** or **Enter 9x**

   To get to the **ID field** on the **Test Ordered Section** or you can simply click on it. The main **Order Entry Keypad** window will display.

**From the Order Entry Keypad:**

7. **P**

   To select Miscellaneous Swab C&S

8. **Source**

   Click on drop down button to display list. Click on appropriate Source or choose # from keypad.

9. Click on **Add/F6 button 2x**

   To document **Collected, Received time and date**

10. Click on **Media button**

    **Media Screen** window displays

11. Click on a blank field on the test line (SWAB)

12. Click on drop down button or **Add Media**

    **Search result** window displays list. Double click on CHOC or choose # from keypad then click OK.

13. Click **OK**

    To close **Media Screen**

14. **Save**

    Click on **SAVE icon** or **Control S** to save the order

15. **Click Yes or type Y**

    To answer the question “**Do you want to save the changes you made to order?**

16. **Choose label printer**

    **OK** to print **Collection Label (for all collected specimens)**

17. **Order Entry Search Screen** displays, cursor defaults to the **Billing field**
Cancel an Order (Specimens from Non-Interfaced Sites)

Cancel an entire order if a mistake has been made at order entry and the order has been saved.

**KEYSTROKES**

Log into the system

1. Double Click on the **Order Entry Icon**

   Order Entry Search Screen displays, cursor defaults to the **Billing** field

2. Click on the **MRN** or **Last Name** field

   Type in patient’s **MRN** or **Last Name**.
   (You can use the patient you created in Exercise 2)

3. Click on **Next** button or press **Enter**

   Search patient by **MRN** or **Last Name**
   List of MRN displays, choose correct MRN
   If a similar name(s) exists in the system, a list will display on a window, look for a match.

4. Click on **Next** button or press **Enter**

   Search window containing stays on the patient displays. Select the original stay. If the patient has more than one order entered into the system, list will display. Select the appropriate one, then click **Finish** button.

   The Order Entry Screen on **Read Mode** displays with all the information from the original order. Click on **Edit Mode icon** or **F7** to edit the order.

5. Click on the test you want to cancel

   Click **Cancel** button

6. Click **Yes** or type **Y**

   To answer the question “Do you really want to cancel TBX”?

7. **Enter cancellation reason** or **F5** for Canned Messages

**NOTE:** This document is Uncontrolled When Printed.
Any documents appearing in paper form that do not state “CONTROLLED COPY” in red print are not controlled and should be checked against the document (titled as above) on the server prior to use.

Results Entry

**Result Entry One Order**

**KEYSTROKE**

**INSTRUCTIONS/RESULTS**

**Searching for a Patient in Result Entry**

1. Select Results > Result Entry from the main menu. Result Entry Search Wizard is displayed.

2. Enter the desired search criteria (Search by: patient’s last name, MRN, SSN, etc.).

3. Click Next to continue. A list of patients displays matching the criteria entered.

**NOTE:** Enter only the information known to be correct. If incorrect information is entered, the desired patient may not apply to the search and therefore not appear on the search list. Entering the order number will take the user directly to that order in Results Entry.

4. Select the desired patient and press Enter. A list of order numbers displays for this patient.

5. Select the desired order and press Enter. The Result Entry window is displayed.

**Entering Isolate Information in Result Entry**

1. Highlight a test or media associated with the isolate. This will autopopulate the Test ID and/or Media ID field(s) in the Isolates tab.

2. From the Result Entry window, select the Isolates tab.

3. On the top section of the Isolates tab, enter any necessary information into the isolate fields.

4. Enter a number in the first available #column.
5. Click in each field to enter results. Some fields may have keypads display to facilitate result entry. Remember to turn the keypad off if you need to enter something by free text.

A typical example of entering isolate information is as follows:
1. Enter 1 in the # field.
2. Select the desired sensitivity modality (MIC, KB, or BP) and select the appropriate panel from the drop down list.
3. Select the appropriate ID panel from the drop down list.
4. Enter the user defined quantitation (1+, 2+, rare, few, etc.) in the Quantitation field.
5. Select an organism ID code (esccol, staaaur, etc.) from the drop down list.
6. Add an isolate comment if necessary.
7. Click the Verify One or Verify All button to post the selected information.

**Generating Drugs**

1. Click the desired modality tab (MIC, KB, BP). The ordered panel will display in the Panel ID field.
2. Choose the correct isolate.
   The first isolate will be selected by default. If this is not the correct isolate, click the drop-down arrow in the Isolate field to display a list of isolates and select the appropriate one.
3. Click the Generate Drugs button. Antibiotics associated with the ordered panel will display in the Drug Name fields as well as any rules that may have been defined in the Drugs Setup file.

**Adding Media in Result Entry**

Example: To add COMM for Comments

1. From the Media section, click the Add Media button or press F9. The Select Media window is displayed.
2. Enter the desired search criteria. A list of media that matches the search criteria is displayed.
3. Select a media and click OK. The media is added into the first available Media ID field.
**Drug Manipulation**

Drugs can be added, cancelled, deleted, suppressed and unsuppressed as needed to ensure the desired information is sent to the physician. A brief description of each process is included below.

**Adding a Drug**

Select the desired sensitivity modality and click the Add Drug button and select the desired drug from the search window.

** Cancelling a Drug**

Select the desired drug to cancel and click the Cancel Drug button.

*Result:* A red check will display in the Cancelled column.

*NOTE:* Remember the suppression field indicates drugs that have been cancelled (suppressed), based on suppression rules as defined in the Drugs Setup file, resulting in the ability to distinguish between manually suppressed drugs vs. rules suppressed drugs.

**Deleting a Drug**

The same rules apply to deletion of drugs that apply to tests and media. If the drug has been saved, it should be cancelled, not deleted. Deleting the drug removes the drug and any result associated with it.

**Unsuppressing a Drug**

There are times when a physician may request testing a drug that is normally suppressed with a suppression rule. To unsuppress the results, click the Cancel Drug button twice. The first click will add a red check (cancel) to the cancelled column, and the second click will add a green "A" (add). The drug is now added.
Isolate Suppression

As a rule, the isolates will report in the order in which they are entered in Results Entry. Usually, the order is numerical unless organisms have been suppressed from reporting. There may be reasons to suppress organisms from reporting (for example, polymorphic isolates that are identified as the same organism with the same drug results). Suppression can be accomplished by changing the numerical character to a letter. The organism is suppressed from being reported, yet maintains all the links with comments and drug results. This action can be useful for workload reporting.
Batch Resulting

MRSA Bench

1. Negative report: Negative - No methicillin-resistant Staphylococcus aureus (MRSA) isolated

Data Entered:

DBlue Media: 24hr – No Blue

TEST COMMENT: Negative - No methicillin-resistant Staphylococcus aureus (MRSA) isolated.

STATUS: Final

Procedure

1. IC/ Other Worklist - IC  MRSA New Work
2. Press Enter or Click OK
3. Bridge to QC (yes or No)

4. Opens Micros [IC/OtherWorklist (ICMRN)]
5. Bottom Left of Screen: Click Mark (F8) grayed out – means active
   Also displays total number of orders in Worklist and Marked orders

6. Scan Barcode Labels of Sample (No Blue Cols)

   Red Check Mark will appear for scanned order
Bottom of Worklist: Displays how many orders were marked

7. Click on (Define a Media Comment)

8. Type: DBLUE then Click OK
9. If Keypad does not pop up, Click on Enter or Press Ctrl+K to activate
10. From Keypad pick (DBLUE -1 of 3) **24hr**: then Keypad (DBLUE -2 of 3) **No Blue**, Click **OK**

11. Click on **Add Results** (*F7*) (Add Results to Patient Records)
   A window is displayed indicating how many orders qualified. The red check mark turns into a green exclamation point
   - ![Green exclamation point](image)

12. Click on **Remark** (*K*) (Remark Previous Selections)
   Red Check Mark will reappear
13. Click on Define TC (\T) (Define a Test Comment) then Click OK.

(If Keypad does not pop up, Click on Keypad (\K) or Press Ctrl+K to activate)
14. From Keypad pick (MRS – 1 of 4))NMRS , Click

15. Click on Set Status to Final , Click
16. Click on (Add Results to Patient Records)

17. A window is displayed indicating how many orders qualified. The red check mark turns into a green exclamation point

18. To check one,
   18.1. Double click on Order Number – Opens Result Entry Screen for that order
   18.2. Check Test Comment (F8 to see the full comment)

   **Negative - No methicillin-resistant Staphylococcus aureus (MRSA) isolated.**
18.3 Check Media Comment

7. Click OK button
8. Either right click on the desired order number or click on Mark button and scan in an order number
9. Click on the Download Selected Order numbers icon
10. Click OK.
SoftMic QC Entry

KEYSTROKE | INSTRUCTION/RESULTS
--- | ---
1. Choose a worklist to log onto | “Micro Results Entry” window pops up.
2. Choose “YES” to the question “Would you like to bridge to SoftMic QC” | The “Bridge” window will open and the “SoftMic QC Result Entry” screen appears.
4. Arrow down and press enter at the specific line where desired QC result is to be entered.
5. Enter results for each organism from keypad selection.
   *if all results entered are within expected limits, go to step 14.
6. If result entered is out of range, a window for result action will show on the screen.
7. Press F2 | look for options for actions to be taken
8. Arrow down to pick the appropriate action from the provided list
9. Press Enter then F12
10. Choose 2 “COMMR” if nothing on the list is desired
11. Press “Enter” | to go to the free text line
12. Type in an explanation or corrective action.
13. Press F12 | this saves QC result
14. Press 1 | to enter Lot number
15. Press F2 | to bring up a list of Action Codes
16. Press 6 for Lot Number
17. Press “Enter”

18. Enter Lot Number

19. Press F12 to save entry

20. Press 1 to enter Expiry Date

21. Press F2 to bring up a list of Action Codes

22. Press 4 for Expiry Date

23. Press “Enter”

24. Enter Expiry Date

25. Press F12 to save entry

26. Press F12 to save session

27. Press “Y” to answer “Confirm Modification” and save

28. Go to the next QC item to be recorded and proceed as above.

29. Press F12, then F1 to save session and close SoftMic QC

30. **Once in a worklist, To bridge to SoftMic QC, click on “Tools” in the Main Toolbar Drop down menu will appear

31. Choose SoftMic QC “Bridge” window to SoftMic QC will appear

32. Enter your ID

33. Enter your system password Screen defaults to 1-Tasks

34. Choose “E” (Results Entry) SoftMic QC Results Entry Screen appears

35. F12
36. Choose a “Task” from the list that corresponds to the bench QC needed.
i.e. #3 BC-QC  Blood Culture Bench QC
(move the cursor by arrowing down and/or paging down for more options)

37. F12

38. Proceed to enter QC (see Step 4).
SoftLab

**LIS Serology - Introduction**

**Test Codes**

Serology at the Department of Microbiology share the same SCC SoftLab module as MSH Pathology Department. To distinguish from 3000 other tests in the LIS, all Serology In House tests performed have test codes that start with 8, therefore a complete list can be obtained by entering 8, then F2 to search in any “test” field. Send-out tests start with the number 9 and Study/Research with number 10. Almost all non-blood Microbiology specimens are processed through the SCC SoftMic module (CSF antibodies are processed through the SoftLab module).

**Instrument-Interfaced Tests**

**ARCHITECT, EVOLIS and COBAS AMPLILINK**

The Abbott Architect communicates through a bidirectional interface, i.e., LIS downloads orders and patient demographics. Results upload back to the LIS. The extension number 96 for Architect and Evolis except Galactomannan BAL extension number 99 and for Amplilink/Taqman extension number is 04 at the end of the 8-digit LIS order number is required.

Other than HbsAg, numeric results initially produced by the Architect are first interpreted within the Architect into text form (e.g., REACTIVE, NEGATIVE, NONREACTIVE).

These results may not be reported until either the LIS translates them into a reportable format (e.g., POSITIVE, Negative) or a technologist enters the result manually after performing and reviewing all required confirming tests (see Serology Bench Manual).

For HbsAg only

HbsAg values <0.049 are posted by Architect and then translated by LIS to Negative other results are posted as numeric values to LIS.

**Automatic Downloading, Automatic Posting** and the **Report Scheduler** eliminate most manual result entry. However, manual Architect result entry is still required for REACTIVE HbsAg, HBCaB, HCV and HIS (see LIS Serology – Result Entry: By Test) Architect QC tests require manual posting (see POSTING QC IN LIS)

**Manual Tests**
All other tests without an instrument interface are regarded as Manual Tests. They should be resulted through Tasklists (Section 6 Result Entry: by Tasklist) which link to the required QC. Tasklists for Evolis tests are used to organizing the run, review the results and link to QC.

AXSYM Tests results for TGLN samples are printed out and results are entered manually in LIS.
Basic Lab Query

KEYSTROKE

INSTRUCTIONS/RESULTS

The Lab Results Query window enables you to review specific test information

Searching for Lab Results in Lab Results Query

1. Log on to SoftLab or SoftMic

2. Double click Lab Query Icon

3. **Patient Selection Area:**
   - Move cursor to MRN# and
   - Key in patient's Medical record Number

   Enter any available information at hand
   The more data you enter, the more specific
   the query results will be.

4. **Time Range Area:** defaults to One Year:
   (Time range can be changed by clicking on the drop down arrow)

5. **Format:** Click on All Tests as Ordered
   Click Advanced to add more than one test to query

6. Click **Query**

7. Check Patient Information

8. Open Stay folder by clicking on the + sign
   in front of the folder

9. Click on the specific Order

10. Close the Lab Results Query Window to exit

Building Tasklist

KEYSTROKE INSTRUCTIONS/RESULTS

Creating a Tasklist

1. Log on to SoftLab
2. Double Click on Tasklist Icon Tasklist window appears
3. Click on New Icon Defaults to Processed: last 3 days (change if needed)
4. Creation Template: Enter Test Code (eg. 8VD) Click drop down or Press F2 for list
5. Select Status: pending and nonverified
6. At samples 1.Q, 2.Q, 3.Q, etc. scan control barcodes for each control
   For controls with numeric values QC names are entered automatically in the tasklist
7. Click Add Missing or Press F6, check that numbers displayed match samples then “Yes”
   If you want to print screen to view and check order numbers against tubes in rack
   a. Click Printer Icon in Tasklist Menu
   b. Click Print Preview
   DO NOT SAVE THE TASKLIST UNTIL IT MATCHES WHAT YOU HAVE.
   Click Delete Button or Press F8 to delete samples
   Click Insert or Press F5 to insert samples on the list
8. Click Save icon then “Yes”
9. Click OK
10. To print the Tasklist
    a. Click Printer Icon in Tasklist Menu
    b. Print To: Select Report Printer ID
    c. Defaults to Layout: TL_List
    d. Defaults to Number of Copies: 1
    e. Click OK

11. When setting up the test run, record the lot# of the kit and expiry date on the Tasklist beside the controls.
12. After performing the test, manually record the results of the controls and patients samples on this original Tasklist. Ensure that the initials of the Tech performing the test and checking and verifying the test (if appropriate) is recorded.
Editing Tasklist

You may need to edit the tasklist that was created and saved before if you have more samples to add or delete from the list.

**KEYSTROKE**

13. Log on to **SoftLab**
14. Double Click on **Tasklist Icon**
15. Tasklist ID: Scan or Enter Tasklist ID
16. Highlight and Delete Tech ID (if you are not the one who created the tasklist)
17. Click Edit Icon
18. Click to the next available Field
   a. Click **Add Missing or Press F6**
      The Add Missing (F6) button enables you to add orders to the tasklist
   
   b. Click **Insert Button or Press F5**
      The Insert (F5) button enables you to insert an order between orders on the tasklist.
   
   b. Click **Delete Button or Press F8**
      The Delete (F8) button enables you to delete/remove orders from the tasklist.

19. Click **Save** icon then click “**Yes**” to save
20. Click **OK**
21. To print the Tasklist
   a. Click **Printer Icon** in Tasklist Menu
   b. **Print To:** Select Report Printer ID
   c. Defaults to **Layout:** **TL_List**
   d. Defaults to **Number of Copies:** 1
   e. Click **OK**

Fields And Buttons Descriptions - Tasklist

The following section provides reference information about the buttons, windows, and dialog boxes that correspond to the Tasklist option. This reference section provides quick information about the fields and buttons used when working in tasklist window.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tasklist ID</td>
<td>This field displays the Tasklist ID. When you create a new tasklist, the next available tasklist ID is automatically generated. Reference laboratory test can qualify for tasklists at the specimen/ordered test level for the system.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE:</strong> The Tasklist can be utilized in Autotracking without the user having to rescan specimens into specimen tracking.</td>
</tr>
<tr>
<td>Tech</td>
<td>This field defaults to the technologist currently signed on to the system. If you want to change the technologist ID, click the arrow button (or press F2) to select from a list of valid technologists.</td>
</tr>
<tr>
<td>Creation Date/Time</td>
<td>These fields automatically default to the current date and time.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Creation Template</td>
<td>This field displays the template code previously created for use in the tasklist. Enter the worklist template code previously created for use in this tasklist, or click arrow button (or press F2) to display a list of all defined codes. Once a worklist template code is entered, the heading of the template displays to the right of the template code.</td>
</tr>
<tr>
<td>Specimens only</td>
<td>Check this box to access tests by specimen only.</td>
</tr>
<tr>
<td>Qualification Type</td>
<td>This field displays a qualification type. Click the drop-down arrow button to select a qualification type.</td>
</tr>
<tr>
<td></td>
<td>- 1.9 — This number of tests should be present on the order</td>
</tr>
<tr>
<td></td>
<td>- A — All tests should be present on the order</td>
</tr>
<tr>
<td></td>
<td>- S — At least one test should be present on the order</td>
</tr>
<tr>
<td>Processed</td>
<td>This field is used to specify a timeframe during which, if specimens were processed, they will qualify to the tasklist. Select Custom. The date that is used to qualify tests to the tasklist depends on what you select in the Status field.</td>
</tr>
<tr>
<td>Status</td>
<td>Used in conjunction with the Processed field. Select one of the following statuses for qualifying tests to the tasklist:</td>
</tr>
<tr>
<td></td>
<td>- Pending — Tests for which results have not been entered. Uses the collected date or to be collected date for the specimens.</td>
</tr>
<tr>
<td></td>
<td>- Nonverified — Tests for which results have been entered in the result database. Includes resulted manually or from instruments. Uses the resulted date.</td>
</tr>
<tr>
<td></td>
<td>- Pend + Nonver — Tests with both a pending and nonverified status (as described above). Uses the collected date or to be collected date for the specimens.</td>
</tr>
<tr>
<td></td>
<td>- All — Searches for all tests. Uses the collected date or to be collected date for the specimens.</td>
</tr>
<tr>
<td></td>
<td>- Verified — Tests for which results have been verified. Uses the verified date for the specimens.</td>
</tr>
<tr>
<td></td>
<td>- Not Reviewed — This option is used to compile a worklist of all tests that are to be reviewed. The test must be the first test on the worklist template(s) and defined as an individual test in the Individual Tests Setup file. The result for test must have pending in the result field or remain blank in order to appear on the list. The template must have all other test results completed/verified except for the review test.</td>
</tr>
<tr>
<td></td>
<td>- Reviewable — This option is used to compile a worklist of all tests that are reviewable. The test must be the first test on the worklist template(s) and defined as an individual test in the Individual Tests Setup file. The template must have all other results completed/verified. The result for the test must have one of the following values: reviewed with results and verified, pending, or left blank. The difference between this option and not reviewed is that the test in question can have a result whether verified or not. Canceled</td>
</tr>
<tr>

**Result Entry – One Order Number**

You may need this to enter the results of test performed that requires the use of a keypad., ie results that are REACTIVE in initial testing and repeat testing was done. HCA negative results (also on rare occasions, HBsAb or HBeAg, VZ-NEGATIVE need to be changed from “neg” to “Negative” in LIS). Manual tests for which a tasklist are made are best entered under Result Entry by Tasklist

**KEYSTROKE**

**INSTRUCTIONS/RESULTS**

To enter Result

1. Log on to SofLab
2. Double Click Result Entry icon Search Order window appears
   Defaults to Select tests by:Tests
3. Click on Order field and Scan or manually Enter Order Number
4. Click Next Result Entry Window appears
   Defaults to Result field
5. Enter QC results at this time (if appropriate)
   a. The Results for QC entry box appears when the QC was not yet entered on that day
   b. if not Click QC Current Result (+)         Results for QC Window appears
      or Press SHIFT and + at the same time
   c. Click on QC result field and enter result
   d. After all QC results are entered Click Close Automatically saves the entry.

7. Enter Patient Result using the keypad.
8. Click Save Icon then “Yes” to save
Result Entry - Batch Resulting (Tasklist)

This type of result entry is used for manual test for which a tasklist was made: VDRL, Monospot, HTLE, VZ, 8HAGE etc.

KEYSTROKE

1. Log on to SoftLab
2. Double Click Batch Resulting Worklist Icon Batch Worklist window appears
3. Click drop down and select Tasklist
4. Scan or Enter Tasklist number manually
5. Click on Test drop down
6. Click OK

INSTRUCTIONS/RESULTS

Enter QC results at this time (if appropriate)

a. Results for QC when the QC was not yet entered on that day
b. Open up Result Entry window for one order by pressing enter on highlighted order
c. Click QC Current Result (+) or Press SHIFT and + at the same time
   Results for QC Window appears
   d. Click on QC result field and enter result
   e. After all QC results are entered Click Close
   f. Close the Result Entry Screen of the Order Brings you back to tasklist

7. Click Mark All or Press Ctrl+A (if you want to enter the same to all the numbers)
   If you want to enter result on selected Orders only
   a. Click on the Order Number
   b. Click Mark or Press Space Bar Marks Order
   or Right Click on Mark field of the Order
   c. Repeat Steps a and b until all Orders are marked
8. Click Add Result or Press Ctrl+F7 Result Mark Orders window appears
9. Using the keypad ,(Press Ctrl + K to display keypad) then enter result
10. You have option to verify or not at this point, Add Message, Add Result Comment, Add Specimen comment
11. Click **Save Icon**, then “**Yes**” to save
Verifying Result – One Order

KEYSTROKE

1. Log on to SofLab
2. Double Click Result Entry icon
3. Click on Order field and Scan or manually Enter Order Number
4. Click Next
5. To verify one test (highlight the one you wanted to verify) Click Verify, then Click Save Icon then “Yes” to save
6. Click Verify All if you wanted to verify all the test results you entered then “Yes” to save.

INSTRUCTIONS/RESULTS

Search Order window appears
Defaults to Select tests by: Tests
Result Entry Window appears
Defaults to Result field

Verifying Result – Tasklist

**KEYSTROKE**

**INSTRUCTIONS/RESULTS**

To check if results are entered correctly and to verify tests from Tasklist

1. Log on to **SoftLab**
2. Double Click **Batch Resulting Worklist** icon  
   Batch Worklist window appears
   Defaults Select tests by: Tests
3. Click **drop down** and select **Tasklist**  
   Test Template appears, Creation date
   And Tech User Id appears
4. Scan or Enter Tasklist number manually  
   Test Code appears
5. Click on test **drop down**  
   Empty Tasklist appears
6. Click **OK**
7. Click **Not Verified or Press Ctrl+8** (Filters- left hand side)  
   Orders not yet verified in that specific wordlist are listed.
8. Open up Result Entry window for one order by pressing enter on highlighted order  
   Or double click on Order Number
9. To verify one test (highlight the one you wanted to verify) Click **Verify** or Press “ [  
   ,then Click **Save** Icon then “Yes” to save
10. Click **Verify All or Press ;** if you wanted to verify all the tests results you entered  
    then “Yes” to save.
**Fields and Buttons Descriptions – Result Window**

**Results Window – Patient Demographics Area**
The top area of the Results window is the patient demographics area. It displays the patient and order information for the selected order.

<table>
<thead>
<tr>
<th>Field</th>

<tr>
<td>T Ord</td>
<td>This field displays the test ID as it was order in Order Entry. The system defaults information into this field.</td>
</tr>
</tbody>
</table>
| TAT Status | The three settings for this field indicate the status of the “turnaround time” for the particular test. The settings include:  
- Green box with arrows – The TAT has not exceeded 90% of the maximum TAT.  
- Yellow box with arrows – The TAT has exceeded 90% of the maximum TAT.  
- Red box with arrows – The maximum TAT has been exceeded. The maximum TAT time is determined in Setup > Tests Maintenance. |
| Units | This read-only field displays the units of measure for the test. |
| QC Status | This field displays the QC status for an individual test. The status may be passed or failed. Passed QC status indicates that the test may be resulted. If the status is failed, the test may not be resulted. |
| Wrkst | This field indicates the workstation where the test is being performed. |
| Spec | This field indicates the specimen type. |
| D | “D” displays a symbolic representation of the delta flag associated with the result. The size of this field may be changed by clicking the vertical line and dragging it to the left or right. The symbols are as follows:  
- Blue % symbol – Percent of delta failure.  
- Green “A” symbol – Absolute delta failure. |
| Date | This read-only field indicates the date the result was entered in the system. Once a result is entered, the current date will automatically populate this field. |
| Time | This read-only field indicates the time the result was entered in the system. Once a result is entered, the current time will automatically populate this field. |
| Prev Time | This column displays the time of the previous result value for the test. |
| Prev Order | This column displays the order number of the previous result value for the test. |
| T Name | This column displays the test name that is listed in the T Ind column. The test name comes from the Test Name field in the test setup. |
| T Ind S | This column displays the second ID that comes from the second ID field in the test setup. |

</tr>
</tbody>
</table>
### Field Description

**Creation Template**
This field displays the template code previously created for use in the tasklist. Enter the worklist template code previously created for use in this tasklist, or click arrow button (or press F2) to display a list of all defined codes. Once a worklist template code is entered, the heading of the template displays to the right of the template code.

**Specimens only**
Check this box to access tests by specimen only.

**Qualification Type**
This field displays a qualification type. Click the drop-down arrow button to select a qualification type.
- **1-9** — This number of tests should be present on the order
- **A** — All tests should be present on the order
- **S** — At least one test should be present on the order

**Processed**
This field is used to specify a timeframe during which, if specimens were processed, they will qualify to the tasklist. To enter a custom time frame, select Custom.

The date that is used to qualify tests to the tasklist depends on what you select in the Status field.

**Status**
Used in conjunction with the Processed field. Select one of the following statuses for qualifying tests to the tasklist:
- **Pending** — Tests for which results have not been entered. Uses the collected date or to be collected date for the specimen.
- **Nonverified** — Tests for which results have been entered in the result database. Includes resulted manually or from instruments. Uses the resulted date.
- **Pending + Nonverified** — Tests with both a pending and nonverified status (as described above). Uses the collected date or to be collected date for the specimen.
- **All** — Searches for all tests. Uses the collected date or to be collected date for the specimen.
- **Verified** — Tests for which results have been verified. Uses the verified date for the specimen.
- **Not Reviewed** — This option is used to compile a worklist of all tests that are to be reviewed. The test must be the first test on the worklist template(s) and defined as an individual test in the Individual Tests Setup file. The result for test must have pending in the result field or remain blank in order to appear on the list. The template must have all other test results completed/verified except for the review test.
- **Reviewable** — This option is used to compile a worklist of all tests that are reviewable. The test must be the first test on the worklist template(s) and defined as an individual test in the Individual Tests Setup file. The template must have all other results completed/verified. The result for the test must have one of the following values: reviewed with results and verified, pending, or left blank. The difference between this option and not reviewed is that the test in question can have a result whether verified or not. Canceled

**Button Description**

- **Comm [ent] Button**: The Comm button enables you to add a comment for the result. Click the Comm button to enter a comment for the current result.
- **Post All Button**: The Post All button enables you to post all results for the test.
- **Part Post Button**: The Part Post button enables you to post tests individually.
- **Rerun & DnLoad Button**: To toggle the rerun status for the selected order, click the Rerun & DnLoad Button. The entire order will be rerun.
- **Rerun Rep Button**: The Rerun report button enables you to rerun the selected report.
- **Check Button**: The Check button enables you to check result information. Click the Check button to display the Result Information window.
- **Canned Msg Button**: The Canned Msg button enables you to enter a canned message for a result. Enter leading characters of the canned message (or press []) or click the Cnd Msg button to add a canned message to this result. A list of defined messages displays. Select the desired message and press ENTER. The verification window then displays.

</tbody>
</table>
### Help (F1)
To display help information for any field, button, checkbox, or option button, click the Help button, press F1, or select Help > What’s This.

### Run Report (CTRL+R)
To display the Available Reports window, click the Run Report button or press CTRL + R, or select Tools > Run Report. Select the report that you want to generate and click OK.

### Launch Report Viewer (SHIFT+F2)
To view reports that have been generated and then saved in electronic format, click the Launch Report Viewer (SHIFT+F2) button or press SHIFT + F2, or select Tools > View Existing Report.

### Lab Results Query
To bridge to the Lab Results Query option, click the Lab Results Query button or select Tools > Lab Results Query. The system queries the database and displays lab results information for the current record.

### Specimen Tracking
To bridge to the Specimen Tracking option, click the Specimen Tracking button or select Tools > Specimen Tracking.

### Check Printers
To clear a printer or stop a print job, click the Check Printers button.

### Printer Status
To view the current status of all printers, click the Printer Status button.

### Toggle Cancel Status
To toggle the status between Canceled and Original, click the Toggle Cancel Status button, or click Results > Cancel.

### Corresponding Loadlist / Results records
To view the Loadlist Menu, click the Corresponding Loadlist/Results records button or tab. The number that displays on the Loadlist tab shows the number of records stored in the Loadlist database for the selected instrument interface.

### Open Interface Setup
As a quick bridge to view or maintain parameters for interfacing Laboratory Instruments, Hospital Information System (HIS), Clinical Information System (CIS), Billing System, and separate program functions/servers using different protocol than the Soft-Lab® system, click the Open Interface Setup button.

### Check Communication with the Listening Program
To check on the running status of your instrument interface, click the Check Communication with the Listening Program button.

### Start Interface
To start or restart the communication necessary for a particular interface, click the Start Interface button.
