

UHN/SH ANTIBIOGRAM

All Inpatients and Outpatients

January 1, 2022 - December 31, 2022

Blood Isolates – % Susceptible

	#	%	Fluconazole						
			Fluconazole - 400 mg/d	Fluconazole - 800 mg/d	Voriconazole	Caspofungin	Micafungin	Anidulafungin	
≥80% Susceptible									
70-79% Susceptible									
≤69% Susceptible									

ALL CANDIDA	115	100%	88	90	85	94	98	98
--------------------	------------	-------------	-----------	-----------	-----------	-----------	-----------	-----------

<i>Candida albicans</i> *	69	60%	100	100	100	100	100	100
<i>Candida glabrata</i> (formerly <i>T. glabrata</i>)	23	20%		87		87	96	96
<i>Candida parapsilosis</i>	18	16%	88	89	94	100	100	100
<i>Candida tropicalis</i>	5	4%	75	100	40	100	100	100

Organism-Specific Notes:

* *Candida albicans*: Given shortages of testing material, only a small subset of *C. albicans* had susceptibility testing completed and only upon request. This may be associated with falsely high estimates of non-susceptibility.

^ *Candida glabrata*: There are no breakpoints for voriconazole. There are no breakpoints for fluconazole dosed at 400 mg/d.
